

## Wireless Terminal

Cayman National's wireless terminal operates with the same functions as the traditional dial-up terminal that processes and settles Visa, MasterCard, Discover Card, Diners Club, China UnionPay and American Express credit and debit cards.

The wireless terminal is an easy-to-use payment device offering highly secure, ultra-fast transaction processing, providing data transmission from anywhere without the constraints of wiring. This technology enables the merchant to take control of the transaction process in a number of markets including hospitality, transportation and other mobile services.

The terminal has a wide range of advantages:

- Portable; can be used anywhere throughout the three Cayman Islands
- Will enhance the image of the business
- Potential for increased earnings
- Positive customer service experience
- Will reduce the need to key in transactions due to card not present
- Will minimize chargeback losses
- Will decrease operating costs; no land line required, no dial-up costs per transaction (currently CI\$0.09 per transaction attempt)
- Reduces the risk of internal fraud
- Unlimited transactions for a fixed fee
- Faster connection time than dial-up terminals
- Processes more than 300 transactions on a fully charged battery

A fixed monthly fee covers the SIM card usage for unlimited transactions, terminal rental, paper rolls, servicing of the machine and 24 hour on call support.

We at Cayman National believe in keeping up with technology and assisting our customers in maximizing their efficiency. The launch of our wireless device is a true testament of our commitment to the business community.

Contact one of our Merchant Services Representatives at 345-949-4655 for a demonstration and information on our wireless terminal package.
